No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                           l atgactaagctggaagatca......acatagatatccacaaagag 276
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Description

MEDDHM M., Bierhaus A., Navoch P., Neurath M.F., Slattery T.,
RAGE mediates a novel proinflammatory axis: a central cell surface receptor for S100/calgranulin polypeptides.";
Cell 97:889-901(1999).
--- SIMILARITY: Belongs to the S-100 family.
--- SIMILARITY: Contains 2 EF-hand calcium-binding domains.
                                                                                                                                                                                                                                                                                                                                                                                                                 4 ACTAAGCTGGAAGATCACCTGGAGGGAATCATCAACATCTTCCACCAGTACTCCGTTCGG

                                                                                                                                                                                                                                                                                                                                This sequende represents the CAAF1 calcium-binding protein isolated from bovine amnidtic fluid. CAAF1 belongs to the S100 protein family, which includes calcyclin, MRPB, and MRPP4. Intracellular calcium ion concentration is one of the key factors for intracellular signal transduction. The calcium signals are transduced by various calcium-binding proteins, such as the protein encoded by this sequence. CAAF1 is normally expressed in squamous epithelial cells, neutrophils and macrophages, but atypical epithelial cells are negative for CAAF1 and overexpression is observed in several types of cancer cells and neutrophils/macrophages infiltrating cancerous lesions. Detection of CAAF1 (using antibodies in usual immunoassays) can be used to diagnose for monitor) inflammation, neoplasia (particularly squamous cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   20

novel receptor for advanced glycation end products) peptide (PI). The EN-RAGE peptide binds to RAGE which is a member of the immunoglobulin superfamily of cell-surface molecules. A compound capable of inhibiting the inflammation of EN-RAGE with RAGE is useful for the suppression of inflammation resulting from systemic lupus erythematosus, inflammatory inflammatory disorder in which the recruitment of EN-RAGE containing inflammatory cells occurs. The compound is also useful for the treatment of systemic lupus erythematosus, inflammatory lupus nephritis in a subject. The human EN-RAGE peptide is useful for identifying compounds that inhibit its interaction with RAGE. The present sequence represents the boving CAAFI which shows homology to the human EN-RAGE N-terminal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                123
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CCCAAAACCCTCCAGAACACCAAAGATCAACCTACCATTGACAAAATATTCCAAGACCTG 183

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes an isolated human EN-RAGE (extracellular novel receptor for advanced glycation end products) peptide (PI). The EN-RAGE peptide binds to RAGE which is a member of the immunoglobulin superfamily of cell-surface molecules. A compound capable of inhibiting the interaction of EN-RAGE with RAGE is useful for the suppression of inflammation resulting from systemic lupus erythematosus, inflammatory lupus nephritis, septic shock, endotoxaemia, or an autoimmune or inflammatory disorder in which the recruitment of EN-RAGE containing inflammatory cells occurs. The compound is also useful for the treatment of systemic lupus erythematosus, inflammatory lupus nephritis in a subject. The human EN-RAGE peptide is useful for identifying compounds that inhibit its interaction with RAGE. The present sequence represents the bovine corneal antigen which shows homology to the human EN-RAGE N-

including the sequence AAT62568 and a polypeptide component having the sequence AAW01826, which is encoded by AAT62569. The RNP, or anti-RNP immunoglobulins, can be used to modulate and/or analyse angiogenesis and the vascular state of mammalian tissue, transfer genetic information in cells and selectively alter the nucleic acid content of cells. Leukocytes from pig's blood ware cultured in medium, and the supernatant treated with NH4 sulphate at 35, 45 and 90% saturation to precipitate protein fractions. The residual supernatant was diltued to 45% NH4 sulphate at a state of the supernatant was diltued to 45% NH4 sulphate the retenate was purified to give 8 mg of product described as monocytocards.
                                                                                                                                         183

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes an isolated human EN-RAGE (extracellular novel receptor for advanced glycation end products) peptide (PI). The EN-RAGE peptide binds to RAGE which is a member of the immunoglobulin superfamily of cell-surface molecules. A compound capable of inhibiting the interaction of EN-RAGE with RAGE is useful for the suppression of inflammation resulting from systemic lupus erythematosus, inflammatory inflammatory disorder in which the recruitment of EN-RAGE containing inflammatory cells occurs. The compound is also useful for the treatment of systemic lupus erythematosus, inflammatory lupus nephritis in a subject. The human EN-RAGE peptide is useful for identifying compounds that inhibit its interaction with RAGE. The present sequence represents

Bovine; EN-RAGE; extracellular novel RAGE binding protein; receptor for advanced glycation endproduct; inflammation; inhibition; antiinflammatory; immunoglobulin; cell surface molecule; septic shock; systemic lupus erythematosus; inflammatory lupus nephritis; endotoxaemia; autoimmune disorder; inflammatory disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                          New human EN-RAGE (extracellular novel receptor for advanced glycation end products) peptide, useful for identifying anti-inflammatory compounds that inhibit its interaction with RAGE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            novel receptor for advanced glycation end products) peptide (FI). The EN-
RAGE peptide binds to RAGE which is a member of the immunoglobulin
superfamily of cell-surface molecules. A compound capable of inhibiting
the interaction of EN-RAGE with RAGE is useful for the suppression of
inflammation resulting from systemic lupus erythematosus, inflammatory
inflammatory disorder shock, endotoxaemia, or an autoimmune or
inflammatory cells occurs. The compound is also useful for the treatment
of systemic lupus erythematosus, inflammatory lupus nephritis in a
subject. The human EN-RAGE peptide is useful for identifying compounds
that inhibit its interaction with RAGE. The present sequence represents
the specifically claimed human EN-RAGE N-terminal amino acid sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes an isolated human EN-RAGE (extracellular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CACCAGTACTCCGTTCGGGTGGGGCATTTCGACACCCCTCAACAAG

The single exon nucleic acid probes may be used for predicting, measuring and displaying gene expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from MIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                        Human genome-derived single exon nucleic acid probes useful for analyzing
gene expression in human fetal liver.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Peptide #11058 encoded by probe for measuring placental gene expression.
Human; foetal liver; gene expression; single exon nucleic acid probe
                                                                                                                                                                                                                                                                     Claim 27; SEQ ID NO 35818; 639pp + Sequence Listing; English

single exon nucleic acid probes useful for analyzing
                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to single exon nucleic acid probes (SENP: see AA131315-AA157546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Protein #8280 encoded by probe for measuring heart cell gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human, gene expression, heart, microarray, vascular system, cardiovascular disease, hypertension, cardiac arrhythmia,

                                                                                                                   measuring human gene expression in a sample derived from human heart (see probe. The probes may be used for predicting, measuring and displaying gene expression in samples derived from the human heart via microarrays. By measuring gene expression, the probes are useful for predicting, human heart and wascular system e.g. cardiovascular diseases of the human heart and vascular system e.g. cardiovascular disease. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                              Single exon nucleic acid probes for analyzing gene expression in human hearts.
                                                                                                            The present invention relates to single exon nucleic acid probes for
                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human bone marrow expressed probe encoded protein SEQ ID NO: 37220.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; bone marrow expressed exon; gene expression analysis; probe;
                                                                                                                                                                                                                                                              4 0 0 0 0

The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human bone marrow. They can be used to measure gene expression in bone marrow samples, which may enable the improved diagnosis and treatment of cancers such as lymphona, leukaemia and myeloma. The present sequence is a protein encoded by one of the probes of the invention
                                              Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human bone marrow.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; brain expressed exon; gene expression analysis; probe; microarray; Alzheimer's disease; multiple sclerosis; schizophrenia; epilepsy; cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human brain expressed single exon probe encoded protein SEQ ID NO: 36198
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention provides a number of single exon nucleic acid probes which are derived from genomic sequences expressed in the human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  exon nucleic acid probes for analyzing gene expression in human
                                                                                                                      Example 4; SEQ ID NO 37220; 658pp + Sequence Listing; English.

The invention relates to a single exon nucleic acid probe (SENP) (1) for measuring human gene expression in a sample derived from human adult liver, comprising one of 13109 defined nucleotide sequences given in the specification (or complements / fragments). The probe hybridises at high stringency to a nucleic acid molecule expressed in the human adult liver. (1) may be used for predicting, measuring and displaying gene expression in samples derived from human adult liver. The genes identified may be involved in genetic liver diseases such as cirrhosis, hyperlipidaemia and hyperrcholesterolaemia which is associated with coronary heart disease. ABG47348-ABG59930 represent human liver single exon encoded peptides of the invention. Note: The sequence
brain. They can be used to measure gene expression in brain cell samples, which may enable the diagnosis and improved treatment of nervous system diseases such as Alzheimer's damenty multiple sclerosis, schizophrenia, epilepsy and cancers. The present sequence is a protein encoded by one of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human genome-derived single exon nucleic acid probes useful for analyzing

The invention relates to a spatially-addressable set of single exon nucleic acid probes for measuring gene expression in a sample derived from human lung comprising single exon nucleic acid probes having one of 12614 nucleic acid sequences mentioned in the specification, or their complements or the 12387 open reading frames derived from the 12614 probes. Also included are a microarray comprising the novel set of probes
information for this patent does not appear in the printed specification but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                        Human peptide encoded by genome-derived single exon probe SEQ ID 35692.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; single exon probe; asthma; lung cancer; COPD; ILD; chronic obstructive pulmonary disease; interstitial lung disease; familial idiopathic pulmonary fibrosis; neurofibromatosis; tuberous sclerosis; Gaucher's disease; Niemann-Pick disease; Hermansky-Pudlak syndrome; sarcoidosis; pulmonary haemosiderosis; pulmonary histicoytosis; lymphangioleiomyomtosis; Karagener syndrome; pulmonary alveolar proteinosis; fibrocystic pulmonary dysplasia; primary ciliary dyskinesis; pulmonary hypertension; hyaline membrane disease.

cid expressed in the human lung, measuring gene expression in a sample derived from human lung, comprising (a) contacting the array with a collection of detectably labeled nucleic acide derived from human lung mRNA, and (b) measuring the label detectably bound to each probe of the array, identifying exons in a eukaryotic genome, comprising (a) algorithmically predicting at least one exon from genomic sequences of the eukaryote; and (b) detecting specific hybridisation of detectably labeled nucleic acide from eukaryote lung mRNA, to a single exon probe, labeled nucleic acide from eukaryote lung mRNA, to a single exon probe, labove mentioned microarray; assigning exons to a single gene, comprising (a) identifying exons from genomic sequence by the method above mentioned microarray; assigning exons to a single gene, comprising (a) identifying exons from genomic sequence by the method above mentioned microarray; assigning exons to a single exon probe, in the above mentioned microarray; and/or cell types indicates that tissues and/or cell types using hybridisation to a single exon microarray; and probe with the exon, where a common pattern of expression of the exons in the tissues and/or cell types indicates that the exons should be assigned to a single gene; a peptide comprising one of 12011 sequences, mentioned in the specification, or encoded by the cycobes/open reading frames (ORP). The probes are used for gene expression analysis, and for identifying exons in a gene, particularly using human cauge derived mRNA and for the study of lung diseases such as asthma. Lung derived mRNA and for the study of lung diseases such as asthma. Cycobes are (ILD), familial idiopathic pulmonary fibrosis, pulmonary hypertension and hyaline membrane disease. The cycobes are tsequence is a peptide/protein encoded by a single exon probe of the invention. Note: The sequence dare for this patent disease. The proper of the printed specification, but was obtained in electronic format cof the printed specification, but was obtained in ele novel set of probes which hybridise at high stringency to a nucleic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Patent No. US20020106726A1
GRNERAL INFORMATION:
APPLICANT: Schmidt, Ann Marie
APPLICANT: Stern, David
TITLE OF INVENTION: EXTRACELLULAR NOVEL RAGE BINDING PROTEIN (EN-RAGE) AND USES THERE
CURRENT APPLICATION NUMBER: US/09/826,589
CURRENT FILING DATE: 2001-04-05
NUMBER OF SEQ ID NOS: 6
SOFTWARE: PatentIn version 3.1
SEQ ID NO 4
APPLICANT: Schmidt, Ann Marie
APPLICANT: Stern, David
TTILE OF INVENTION: EXTRACELLULAR NOVEL RAGE BINDING PROTEIN (EN-RAGE) AND USES THERE
TTILE OF INVENTION: EXTRACELLULAR NOVEL RAGE BINDING PROTEIN (EN-RAGE) AND USES THERE
CURRENT APPLICATION NUMBER: US/09/826,589
CURRENT FILING DATE: 2001-04-05
NUMBER OF SEQ ID NOS: 6
SOFTWARE: Patentin version 3.1
LENGTH: 90
ILENGTH: 90
TYPE: RAT
CREANISM: Bovine

US-09-826-589-3
Sequence 3, Application US/09826589
Patent No. 6670136
GENERAL INFORMATION:
APPLICANT: Schmidt, Ann Marie
APPLICANT: Stern, David
ITILE OF INVENTION: EXTRACELLULAR NOVEL RAGE BINDING PROTEIN (EN-RAGE) AND USES THERE
CURRENT APPLICATION NUMBER: US/09/826,589
CURRENT APPLICATION NUMBER: 2001-04-05
NUMBER OF SEQ ID NOS: 6
SOFTWARE: Patentin version 3.1
SEQ ID NO 3
LENGTH: 90

A;Title: Identification and Characterization of a novel human neutrophil protein relater
A,Reference number: S56113; MUID:95351965; PMID:7626002
                                                                                                                                                                                                                                                                                                                                                                                      S-100 calcium-binding protein A12 - human N;Alternate names: calcium-binding amniotic fluid protein 1 (CAAF1); calgranulin C;
         salvasculin - rat
S-100 protein alph
calgranulin A [val
calvasculin - huma
calgranulin A - mo
sandyrazarin - huma
calgranulin A - mo
s-100 calcium-bind
placental calcium-bind
placental calcium-bind
calgranulin A - ra
calgranulin - muse
calgranul - mouse
calcium-binding pr
s-100 calcium-bind
calgrazarin - chic
calpactin I light
calcium-binding pr
                                                                                                                                                                                                                                                                                                                                             ALIGNMENTS
